

WHAT IS CLAIMED IS:

1. A method for providing hotel information comprising the steps of, in combination:
receiving occupancy and rate information from a plurality of hotels; and
preparing and providing a report to the plurality of hotels including current daily rate
and availability information of other hotels.
2. The method according to claim 1, further comprising the step of faxing the report to
the plurality of hotels.
3. The method according to claim 1, further comprising the step of preparing and
providing a unique report to each of a plurality of hotels.
4. The method according to claim 1, further comprising the step of preparing the report
to include current daily rate and availability information for a list of competing hotels.
5. The method according to claim 1, further comprising the step of preparing the report
to include unique notes for each of the plurality of hotels.
6. The method according to claim 1, further comprising the step of preparing the report
to include advertisements.
7. The method according to claim 1, further comprising the step of preparing the report
to include area current event and places information.
8. The method according to claim 1, further comprising the step of preparing the report
to include occupancy percentage and average daily rate information for a predetermined area.

9. The method according to claim 1, further comprising the step of receiving area current event and places information from at least one visitors bureau.

10. A system for providing hotel information comprising, in combination:
a computer connected to a communication system;
wherein the computer is programmed to receive occupancy and rate information from a plurality of hotels; and
wherein the computer is programmed to prepare and provide a report to the plurality of hotels including current daily rate and availability information of other hotels.

11. The system according to claim 10, wherein the computer is programmed to fax the report to the plurality of hotels.

12. The system according to claim 1, wherein the computer is programmed to prepare and provide a unique report to each of a plurality of hotels.

13. The system according to claim 10, wherein the computer is programmed to prepare the report to include current daily rate and availability information for a list of competing hotels.

14. The system according to claim 10, wherein the computer is programmed to prepare the report to include unique notes for each of the plurality of hotels.

15. The system according to claim 10, wherein the computer is programmed to prepare the report to include advertisements.

16. The method according to claim 10, wherein the computer is programmed to prepare the report to include area current event and places information.

17. The system according to claim 10, wherein the computer is programmed to prepare the report to include occupancy percentage and average daily rate information for a predetermined area.

18. A method for providing hotel information comprising the steps of, in combination: receiving current daily rate and availability information from a plurality of hotels; and preparing and providing a unique report for each of the plurality of hotels including current daily rate and availability information for a list of competing hotels and occupancy percentage and average daily rate information for a predetermined area.

19. The method according to claim 18, further comprising the step of faxing the unique reports to the plurality of hotels.

20. The method according to claim 18, further comprising the step of providing the unique reports to the plurality of hotels over a computer network.
